

## PRESS RELEASE

### TEC Soft-close Hinge System

Integrated Face Frame with adjustable closing

The **TEC Soft-close** is a face frame hinge with the Soft-close damper pre-mounted in the hinge cup. Sleek in design, the **TEC Soft-close** features a new adjustable switch to regulate the closing action. A three tiered adjustment provides different levels of resistance on the soft-close mechanism. The settings can be adjusted so that the closing action is consistent regardless of the size and weight of the door. The drilling depth of the cup is 11mm and there are no protruding parts in the interior of the cabinet. Made in the USA the **TEC Soft-close** offers quiet and effortless closing action every time.

The perfect solution for your face frame cabinetry.
