

## PRESS RELEASE

### IWF 2014

August 20 - 23, 2014  
Atlanta, GA

**Booth: # 2137**

### Vionario Drawer System

Grass has set out to create a new drawer concept that promotes clean, well-defined lines coupled with superb functional technology; the result is the new **Vionario Drawer System**.

Current drawer solutions are slide systems for wooden boxes and double wall drawer systems. **Vionario** creates a new drawer system offering a unique innovative design, slim drawer dimensions and high grade material. The cubist drawer system with its strong right angles offers a slim 13mm double wall side, guaranteeing more interior storage space in the drawer. For the manufacturer the only parts necessary are the drawer back, drawer bottom and decorative drawer front.

The **Vionario** drawer members travel on Grass' concealed undermount system, Dynapro. This combination offers **Vionario** excellent running performance due to synchronization mechanism. The operating function of the slides remain unchanged even when moving heavy loads of up to 132 pounds, extra-large drawer boxes or high drawer front panels. The **Vionario** has an extremely low opening pull force and abrasion-resistant nylon rollers ensure smooth and even operation. Efficient assembly of the drawer front with front fixing brackets provides a strong connection to ensure drawer stability. **Vionario** offers 3-dimensional adjustment; vertical, horizontal, and in a tilt angle.

**Vionario** is offered in two heights, 89mm (3 ½"), and 185mm (7 ¼"). The color selection for Vionario in a powder coated steel is Silver Grey, Graphite, and Golden Brown.

The standard **Vionario** offers the Grass Soft-close mechanism which brings the drawer to a gentle quiet close. Other closing options include the Sensomatic, an electro-magnetic opening system; with just a light tap anywhere on the drawer front, the drawers seem to glide open on their own.

**Vionaro's** appearance is modern, elegant and timeless. The slim double-wall drawer sides with a movement technology that has been proven many times over will spark enthusiasm of designers and consumers alike and bring a new classic to the US market.
